

Assignment – 10

(Array Operations)

1. WAP to create a class Array having member variables as an integer array and it's size.

Allocate memory for the Array as per the size specified and initialize it to zero using constructor.

Design methods to perform the following operations on the array:

=> Input required elements into the array.

=> To display the array elements.

=> Calculate sum and average of elements.

=> Swap the max and min elements.
