Assignment-14(2-5-2023)
(Array of Objects & Static Method)

1. Write a java program to create a class **CricketPlayer** (**name, no_of_innings, times_ of_notout, total_runs, bat_avg**). Create an *array of objects* for n players. Calculate the batting average for each player using a *static method* **avg()**. Define a *static method* "**sortPlayer( )**" which sorts the array on the basis of batting average. Display the player details in sorted order.

2. Create a class called **Account** having data members **acct_no**, **acct_type**, **customer_name** and **acct_balance**. Write a java program to input data for five customers and print the details of customer having maximum balance in the account.
